Workstyle[®] Mobile Groupware

Mobile Access to Microsoft Exchange and Lotus Domino

Email is the lifeline of business communication. More and more, your employees need to be able to take their corporate email, calendar, and contact information with them wherever they go. In fact, as the business world moves from wired to non-wired networks, wireless email is a natural first step in the corporate shift toward pervasive computing.

Workstyle® packaged software from Wireless Knowledge lets you take that first step using your company's existing groupware, mobile devices, and wireless carriers.

Workstyle provides secure access to your Microsoft Exchange and Lotus Domino email systems on virtually any mobile device. Workstyle sets the standard for enterprise-grade mobile groupware, and puts your company on the path to mobility quickly and painlessly.

Name Your Device. Workstyle Runs on It

Workstyle runs on the mobile devices your employees already have—including any make or model of Internet-ready mobile phone or personal digital assistant (PDA):

- Internet-ready mobile phones
- Palm OS-based devices
- Windows CE devices
- Pocket PCs
- EPOC-based devices
- RIM Wireless Handheld devices
- Laptops
- BREW-enabled mobile phones
- J2ME-enabled mobile phones (coming soon)

Workstyle's "device diversity" lets you be judicious with your IT dollars. For example, you can equip your executives and field sales representatives with Workstyle on the more expensive storage-capable devices they really need, while providing phone-based email to everyone else in the company. Workstyle enables employees at every level to access their groupware using the device that best fits their rank, job responsibilities, or personal preferences.

What's Your Workstyle?

Workstyle offers your company's mobile employees two ways to access their email, calendar, and contact information: browse and sync.

Browse Mode

In the browse mode, Workstyle creates a secure mobile Web site for accessing the information wirelessly in real-time. Users connect to this site using any device that has a browser. This includes all Internet-ready mobile phones, PDAs, laptops, public kiosks, and WebTV service-based appliances. In fact, mobile workers can check their email via Workstyle on *anyone's* browser-equipped phone – it doesn't have to be their own!

Sync Mode

In the sync mode, Workstyle provides secure wireless synchronization between the user's device and the Exchange or Domino server behind the corporate firewall. Because the information is stored locally on the mobile device, users can access it even when out of network coverage.

- **For PDAs and smart phones**

Workstyle enables users to wirelessly download their email, calendar, and contacts to their smart client device (anything with a Pocket PC, Palm, or EPOC operating system), and wirelessly synchronize their data periodically with the groupware server back at the office.

- **For RIM devices**

Workstyle pushes new email, calendar, and contact information to a user's RIM device immediately after it hits their groupware server. It also enables the user to delete, reply to, and forward email—and fetch additional data, such as contact information—over the air from their RIM device at the push of a button. You never need the cradle to synchronize!

- **For BREW-enabled phones**

Workstyle software for phones equipped with QUALCOMM's new BREW (Binary Runtime Environment for Wireless) applications platform enables any-time wireless synchronization of corporate groupware data. Data storage on the phone increases efficiency: pull up your corporate contact list and push a button to dial the number.

Workstyle: Built for the Enterprise

As one of the world's first enterprise-grade mobile groupware solutions, Workstyle was designed and built with a sharp focus on the corporate IT environment. Enterprise-grade features include:

- The highest security standards available for each type of mobile device. End-to-end data encryption (such as Triple DES) and strict user authentication protocols (such as RSA's SecurID) protect your corporate information.
- Support for load balancing and failover, ensuring quick server response time and no service interruptions in the event of hardware failure.
- Data backup and recovery capabilities for each type of device and mode of operation. If a device is lost, the data is saved.

True to its name, Workstyle accommodates different mobile work styles within your organization. And mobile groupware is just the beginning: Wireless Knowledge's professional services team can design, build, and deliver other strategic mobile applications that can maximize the efficiency and productivity of your workforce. Think of us as your "mobility accelerant," delivering future-focused solutions that put your business in a leadership position today.
